SCERIS ANNOUNCES EXTENSION OF ECONOMIC RECOVERY SOFTWARE GRANT PROGRAM

(Marlborough, MA January 31, 2021) ScerIS, Inc., a 27-year-old software developer and solutions resource that provides software and services to help its customers design and develop efficient digital work processes, has announced the expansion and extension of the ETCETERA® Economic Recovery Software Grant Program.

To help facilitate recovery and strengthen businesses and government entities across the United States during these challenging times, ScerIS initiated this unique Software Grant Program in April 2020. The total value of software grants available to recipients was estimated to be \$200,000,000.

In December 2020, following the resurgence of the COVID-19 virus, the ScerIS Board of Directors approved doubling the total value of available software to \$400,000,000 and extending the period during which businesses and government entities could license the software, free of license fees forever, to October 31, 2021.

Available to organizations large and small, ETCETERA® is the cornerstone technology used to simplify IT, simplify business processes and significantly reduce costs. ETCETERA® is used for robotic process automation, workflows, application development, content services, business intelligence and more.

“Offering unlimited licensing of our software platform will help businesses and our government agencies recover from the negative financial effects of this pandemic faster,” says Jim Walckner, president & CEO, adding “ETCETERA can help our customers bridge financial gaps created by this pandemic while also supporting remote workers, now and in the future”.

For additional information about this program, contact Dan Furbush in our ETCETERA® Economic Recovery Software Grant Program office at 978-218-5072 or dfurbush@sceris.com.
