

ETCETERA® EPM FOR BEHAVIORAL HEALTH - ELECTRONIC MEDICAL RECORDS

Below is a sample list of applications used by behavioral health departments that could be replaced using ETCETERA® Enterprise Process Management (EPM). EPM is comprised of application design, online data capture, automated routing and collaboration with signature capabilities, report generation, and legal electronic storage and access.

The very first application for EPM was to replace an electronic forms interface offered by a software company serving the community behavioral health marketplace. EPM was built specifically to address the complexities of this environment. It has been used to replace

multiple current Electronic Medical Records application deployments as well as provide for new Electronic Medical Records applications. Application User Interface (AUI) design is accomplished in as little as 1 hour per page and most AUI development is performed by non-technical employees.

SceriS is a resource to Behavioral Health Agencies. EPM deployments help reduce costs while facilitating increased employee productivity. It is fully integrated with ETCETERA® Enterprise Content Management (ECM) for Electronic Medical Records. Learn how ETCETERA® software products can help your agency.
